

NeuroTherm[®]
SPINECATH[®]
Intradiscal Catheter

Trailblazing thermal technology

SPINECATH[♦] Intradiscal Catheter for Intradiscal Electrothermal Therapy (IDET[♦])

The catheter heating inside the disc

ELECTROTHERMAL[®] 20S Generator

Catheter inserted in disc under fluoroscopy

The SPINECATH Intradiscal Catheter delivers controlled levels of thermal energy during Intradiscal Electrothermal Therapy (IDET), an effective treatment for patients with chronic discogenic low back pain who have failed to respond to non-operative care. A clinically proven technique, Intradiscal Electrothermal Therapy (IDET), provides a unique minimally invasive method for delivering thermal energy to the disc annulus.

Minimally invasive spine therapy that hits the target—only from NeuroTherm. Our strategic intent is to be: The choice of surgeons worldwide for surgical techniques that reduce trauma and pain to the patient, reduce cost to the healthcare system, and provide better outcomes for surgeons. Please let us know how we can help.

Five-centimeter heating section for thermal conduction over a broad area

Temperature monitoring systems for controlled delivery of thermal energy

A 17-gauge introducer needle for unmatched access to the posterior annulus

Standard and extra-long lengths available to meet a variety of clinical needs

SPINECATH Intradiscal Catheter

REF	Description
7210440	SPINECATH Intradiscal Catheter
7210441	SPINECATH Intradiscal Catheter XL
7209601	Introducer Needle—Genesis II Standard 6" (box of 5)
7209600	Introducer Needle XL—Genesis II Standard 9"
7210644	ELECTROTHERMAL 20S Generator; includes: operations/service manual, 8-pin universal extension cable, power cord, and foot pedal
